

## **OHOSPITAL**

Location of the investment: **Nairobi, Kenya**

Publication: **03.02.2020 07:53**, no. of the advertisement: **1012**

### **What is your idea / business and to whom is it addressed?**

Our idea is software with mobile application connecting the patient to health services. seventy-eight percent of Kenyan cannot access proper health care, the pay out of pocket and hospitals are overcrowded. We are giving the patient a chance to consult doctor, order, and book anywhere they are with having to go and spend hours in a hospital. The platform have personalized doctors with packages for patients.

### **How should the idea/business earn money?**

Our business will be using a freemium business model. we will be earning from subscription and commission from doctors and hospitals. The packages are plan for each doctor's specialty and the pricing is set as per how many patients will be seeking.

### **At what stage is the idea / business at the moment?**

We have work on the project and is live on the web with about 20 hospitals and doctors. we are working on the application and USSD platform. Our aim is to bring onboard investors to expand and market the solution. We are planning to have instance insurance which patients will access even if they are not covered by other policies.

### **What do you need?**

We need an investor who will support us take the business to the next level. If possible they have knowledge of health tech and can help us scale across East Africa. The health gap in East Africa needs a fast solution that we can be able to deliver with the right team.
