What is your idea / business and to whom is it addressed?

Business model for a market in the billions that already is in existence, a real opportunity to make it the largest platform to serve the consumers. This doesn't need no market testing of any kind. Its simply start it!...I repeat, this model is ready to become huge and take over the market it is in 100%.

How should the idea/business earn money?

This is a middle man service for a market that currently exists, the market now is well in the billions, and continues to grow daily. My platform will be the greatest, and with the small advertising, its potential of earning profits the 1st day of launch is extremely likely. Again, theres no buying products to resale, its simply creating the platform and get a percentage of the sale. In a market that's so huge and is growing DAILY!

At what stage is the idea / business at the moment?

The project is on paper. It amazes me the simplicity of it all. My contribution to this business model is the expertise I have on this product(s) and the ideas as to why it will be the LARGEST platform out. Please I have reached out to investors but get no response. I have not discussed the details to any of the investors I have reached out to, and maybe the number 1 reason why I dont get a response. Am just hesitant to provide details of my model to anyone because its a low risk investment to a humongous potential of success. Which is the beauty to my idea. 10 to 20min is sufficient time to provide the details to convince anyone why this is going be a success. I can GUARANTEE the investor(s) this will become maybe the biggest successful business venture in their portfolio. Just few minutes of their time, is all I need, I promise it wont be time wasting. I have the plan, I need help putting it together, which I dont think it should take long. The time it will take, will be on the developer(s)and how long they will take to create it. It will be based on how fast they create the platform.

What do you need?

I am basically looking for start up capital and also help. Its not just about the investment. I need a strategic patner who can also help me developing this platform. I have the blueprint for this model. Even if I only received capital for the model, I wouldn't know where to start. I have the plan, so am looking for help investing and creating the platform, which should be so ridiculously easy. Not much to, I just dont know the right ppl to begin looking.
